Contents

Preface · *xi*

1 Programming with *Mathematica* · 1

1.1 Introduction to programming · 2
Your first Mathematica program · Programming paradigms · Creating programs

1.2 Getting started · 8
Starting and running Mathematica · Mathematical expressions · Functions · Lists · Semicolons · Alternative input syntax · Comments · Exercises

1.3 Getting help · 14
Errors · Getting out of trouble · Function information · Documentation

1.4 Notes and further reading · 18

2 The *Mathematica* language · 19

2.1 Expressions · 20
Atoms · Normal expressions · Display of expressions · Evaluation of expressions · Compound expressions · Nesting expressions · Exercises

2.2 Numbers · 33
Types of numbers · Digits and number bases · Random numbers · Exercises

2.3 Definitions · 41
Defining variables and functions · Immediate vs. delayed assignments · Compound functions · Functions with multiple definitions · Exercises

2.4 Predicates and Boolean operations · 49
Predicates · Relational and logical operators · Exercises

2.5 Attributes · 55
Listable · Hold attributes · Protected · Exercises

2.6 Notes and further reading · 57

© 2015, Paul R. Wellin

3 Lists and associations · 59

3.1 Creating and displaying lists · 60
List structure and syntax · List construction · Displaying lists · Arrays · Exercises

3.2 Testing and measuring lists · 69
Testing a list · Measuring lists · Exercises

3.3 Operations on lists · 72
Extracting elements · Applying functions to lists · Rearranging lists · List component assignment · Multiple lists · Exercises

3.4 Associations · 84
Creating and displaying associations · Operations on associations · Creating a bibliography · Exercises

3.5 Differences from other languages · 90

3.6 Notes and further reading · 93

4 Patterns and rules · 95

4.1 Patterns · 96
Blanks · Pattern matching by type · Explicit pattern matching · Structured patterns · Sequence pattern matching · Conditional pattern matching · Shorthand notation · Alternatives · Repeated patterns · Functions that use patterns · Exercises

4.2 Transformation rules · 111
Creating and using replacement rules · Applying transformation rules · Exercises

4.3 Examples · 116
Counting coins · Filtering and extracting data · Perimeter · Triangle area · Finding parts of expressions · Sorting a list · Sunspot activity · Exercises

4.4 Notes and further reading · 131

5 Functions · 133

5.1 Functions for manipulating expressions · 134
Map · Apply · Thread and MapThread · Listability · Inner and Outer · Select and Pick · Exercises

5.2 Iterating functions · 146
Nest · FixedPoint · NestWhile · Fold · Exercises

5.3 Recursive functions · 152
Fibonacci numbers · Thinking recursively · Dynamic programming · Exercises

5.4 Loops and flow control · 159
Conditional functions · Piecewise-defined functions · Which and Switch · Argument checking · Do and For loops · While loops · Exercises

5.5 Pure functions · 176
Syntax of pure functions · Multiple arguments · Pure predicate functions · Indexing with pure functions · Newton revisited · Example: searching for attributes · Exercises

© 2015, Paul R. Wellin

5.6 Examples · 190
Hamming distance · The Josephus problem · Protein interaction networks · Operating on arrays · Enumerating binary matrices · Clustering data · Exercises

5.7 Notes and further reading · 208

6 Programs · 209

6.1 Scoping constructs · 210
Localizing names: Module · Localizing values: Block · Localizing constants: With · Matrix manipulation · Exercises

6.2 Options and messages · 217
Options · Messages · Exercises

6.3 Examples · 223
Sieve of Eratosthenes · Radius of gyration · Lag plots · Random walks · Exercises

6.4 Notes and further reading · 241

7 Strings · 243

7.1 Structure and syntax · 244
Display of strings · Testing strings · Measuring strings · Character codes · Exercises

7.2 Operations on strings · 247
Basic string operations · Strings vs. lists · Encoding text · Anagrams · Exercises

7.3 String patterns · 255
Finding subsequences with strings · Alternatives · Exercises

7.4 Regular expressions · 261
Contractions · Exercises

7.5 Examples · 267
Abecedarian words · Random strings · Partitioning strings · DNA sequence analysis · Displaying DNA sequences · Blanagrams · Exercises

7.6 Notes and further reading · 281

8 Graphics and visualization · 283

8.1 The graphics language · 284
Primitives · Directives · Options · Three-dimensional graphics · Structure of built-in graphics functions · Exercises

8.2 Dynamic graphics · 292
Manipulate and locators · Dynamic building blocks · Exercises

8.3 Efficient structures · 303
Multi-objects · GraphicsComplex · Numeric vs. symbolic expressions · Exercises

© 2015, Paul R. Wellin

8.4 Examples · 314
Root plots · Venn diagrams · Dot plots · Hypocycloids · Space-filling plots · Simple closed paths · Points in a polygon · Triangle centers · Exercises

8.5 Notes and further reading · 343

9 Program optimization · 345

9.1 Efficient programs · 346
Low-level vs. high-level functions · Pattern matching · Reducing size of computation · Symbolic vs. numeric computation · Listability · Packed arrays · Pure functions · Built-in pure functions · Exercises

9.2 Parallel processing · 366
Basic examples · Profiling · Exercises

9.3 Compiling · 372
Compile · Compiling to C · Exercises

9.4 Notes and further reading · 378

10 Packages · 379

10.1 Working with packages · 379
Loading and using packages · Package location

10.2 Creating packages · 382
Contexts · Package framework · Creation and deployment

10.3 RandomWalks package · 389
Package source code · Running the package · Exercises

10.4 Notes and further reading · 394

Bibliography · 395

Index · 405
